

ORTHO-K

MOLD THE WAY YOUR PATIENTS SEE

Give your patients crisp, clear vision without the typical options of glasses, daytime contact lenses, or LASIK surgery.

Grow your practice while thrilling your patients with a proven vision correction option that can **improve their lives.**

Clinically proven empirical fit outstanding results

Emerald contact lenses are FDA approved and provide easy vision correction by gently reshaping the cornea at night while the patient sleeps.

They are safe, reversible and have been successfully adapted to over a million eyes worldwide with excellent results. Empirically adapted. Clinically proven. With surprising results.

FDA APPROVED
P040029 & P010062

SIMPLIFIED ADVANCED CORNEAL MOLDING

- Proven success rate of 85% in the first adaptation.
- Proven 95.5% success rate with up to 1 change.
- Clinically proven to reduce the progression of myopia in children.
- Simple adaptation only with refraction, keratometry and HVID.
- Empirically adapted - no trial lens required.
- Clinically proven to suppress axial length elongation in childhood myopia.

UNIQUE MULTI-ZONE DESIGN

RADIO OF THE REAR OPTICAL ZONE	Designed to reshape the cornea to the required correction. Unlike a normal GP lens.
REVERSE CURVE	Determined by a clinically proven formula that aligns the base curve with the peripheral cornea and controls the apical clearance of the radius of the posterior optic zone.
ALIGNMENT AREA	A series of two or more separate curves, this zone determines the characteristics of the lens fit. It is designed to align closely with the cornea and provide proper centering for maximum performance.
PERIPHERAL CURVE	Peripheral curve provides clearance at the edge for proper tear exchange and easy lens removal.
